Brad got up late this morning and did not have enough time to make an appropriately sized meal to maintain his gains. He fears that without food he will atrophy as his muscles will not receive enough calories.

1

Brad must find protein. The school cafeteria is not an option, as the food is incredibly unhealthy. Brad also lives in North Dakota, a state with nothing in it, leaving few options.
2

Brad usually packs his own lunch, but when emergencies like this occur, he has the FoodGPS app to help him find sustenance. It knows that he has 1 hour for lunch, and has already located a suitable food place close to drive to and return within the time limit.

3

After receiving the instructions, Brad must act fast. He does not have much time before classes begin. But the FoodGPS has already calculated how long it will take him to get there. Alone on the North Dakota dirt road, Brad arrives at the diner with time to spare.

4

Brad has obtained an appropriate amount of food to keep his gains and drives back to the school he works at with plenty of time to spare thanks to the calculations of the foodGPS.

5

After installing the FoodGPS, Brad does not have to worry about losing his gains anymore and is always consuming a healthy amount of food. Try it today to also get incredible gains.
